1. Introduction

We are an innovative team of 12 members, willing to expand to 15 people. Our team has been constantly growing since our inception in 2017 when we started trading on-chain. Our core activities revolve around monitoring trading operations from our applications, improving current systems in operational logic and technology frameworks, and designing new systems to adapt and

2. Responsibilities

- Design and construct high-performance trading applications tailored to meet the specific needs of the trading team, emphasizing on competitive edge and speed.

- Develop and enhance trading or auxiliary services to continuously optimize performance and efficiency.

- Fetch and integrate data from cryptocurrency exchanges, third-party API providers, and blockchain EVM sources, with a particular focus on Ethereum.

- Aggregate and utilize above data effectively to support dynamic trading strategies.

- Create reusable components to streamline trading strategy development and improve overall functionality.

- Suggest algorithm enhancements based on a deep understanding of application requirements.

- Leverage the latest open-source technologies to ensure the adoption of cutting-edge development practices.

2. Requirements

**Must have:**

- Professional Experience: Minimum of 3 years in software development.

- Demonstrated ability in building high-performance, low-latency applications.

- Proficiency in data structures and algorithms.

- Experience in designing and implementing highly available, scalable cloud-based systems.

- Demonstrated ability to build platform services that enhance developer experiences and meet robust standards.

- Proficiency in backend development with managed languages such as C++, Golang, Rust, or similar; strong preference for Golang expertise, our team's main tech stack.

**Nice to have:**

- Database Expertise: Experience with SQL, NoSQL, and NewSQL databases.

- Familiarity with Ethereum RPC.

- Experience working with APIs from major crypto exchanges like Binance, OKX, Coinbase, etc.

### Soft Skills:

- A passion for staying current with the latest in software engineering and open-source technologies.

- Strong problem-solving skills with a love for challenges.

- Excellent team player, open to sharing ideas and collaborating to find the best solutions.

- Continuous personal and professional development mindset.

**Benefits**

- Full salary during probation.

- Competitive compensation: attractive monthly salary (full salary insurance scheme, additional premium health insurance for employees), 13th-month salary, year-end performance bonus based on the company's business situation, team performance, individual job quality, holiday bonuses, annual salary review, other supplementary benefits (depending on the position).

- Opportunity to work directly with many pioneering blockchain technology experts worldwide and colleagues from different countries

- Opportunity for constant challenges and learning with various interesting projects/products in leading-edge technology, sponsored participation in hackathons in Vietnam and abroad, working with outstanding colleagues with many awards and experiences - young but talented.

- Flexible working hours: no time clock, optional remote workdays monthly, besides 12 standard paid leave days/year, additional paid leave on birthdays, for voluntary activities, or attending family events.

- Dynamic working environment: regular team-building activities, annual team trips. Various interest clubs available for participation.

- Annual regular health check-ups at reputable hospitals. Support for employees to purchase supplementary health insurance for family members if needed.

- Always the first to receive premium branded items: summer/fall/winter uniforms, masks, socks, umbrellas, desk calendars, notebooks, pens, mouse pads..

# **Interview Process**
